News release

Prospects for Easter weather

2 April 2004

Met Office forecasters are predicting that the weather for the Easter period is looking unsettled for many parts. Computer models from most forecasting centres are indicating that a large area of low pressure will affect the UK through the holiday period.

The detail of the local weather remains uncertain at this point, but there is a strong signal for:

- Below average temperatures
- Showery weather through the Easter period, although many areas seeing spells of sunshine between the showers
- The likelihood of snow particularly over hills

Further information on the forecast will be provided through the coming week, containing more detail for local areas. The best advice is to obtain the latest weather forecast before making plans for the holiday period.
